

Empowered[®] DNS/DHCP/IPAM Assessment

DNS, DHCP, and IP Address Management (DDI) are critical services in any effective IT environment. Empowered's DDI Assessment is a packaged professional service engagement that provides detailed information to help you plan for the modernization and hardening of your DNS, DHCP, and IP Address Management systems.

Many enterprises who have not yet modernized their DDI platforms to commercial-grade systems, are now considering the investment due to heightened security concerns and also scalability challenges presented by outdated tools.

What to expect from a DDI Assessment:

Empowered's DDI Assessment is a holistic review of your currently deployed DDI systems of record to understand the following:

- > Assess the current-state architecture of the DDI systems of record and understand the type and quality of data contained in each system
- > Review current processes and work instructions that surround move, add, change, and delete operations on the current DDI systems of record
- > Collect a catalogue of systems, both customer and vendor-operated, that interact with the DDI systems of record
- > Assess the potential impacts to systems and associated interactions that may result from any future DDI modernization activities and identify opportunities for additional optimizations
- > Review current policy documents pertaining to DDI functions to understand how those policies may be accommodated by and integrated into any future DDI modernization activities
- > For existing DDI initiatives, review the proposed Bill of Materials and Conceptual Design Document for any DDI system implementation to ensure alignment with operational requirements
- > Prepare and present a report summarizing all findings and recommendations

Our Structured Approach:

We've developed a structured methodology that combines technical data acquisition with consultative expertise to examine your DDI infrastructure and the processes that surround it. Our experts will **collect, organize, and analyze data** on your existing DDI tooling and environment. From this basis, we provide **strategic guidance** on how and where to optimize and modernize your DDI environment to maximize value to the business.

About Empowered

Empowered Networks[®] optimizes network monitoring, management, security and compliance for many of the world's largest companies. Our team helps select, deploy and operate technologies that make applications, networks and services more agile, more visible, and more dependable. We drive positive business outcomes that translate directly to the bottom line.
